PROFESSIONAL SUMMARY

MTech in Computer Science and Engineering student and knowledge in Python, Django, Django REST Framework, REST APIs. Develop backend solutions with a focus on reliable implementation and troubleshooting. Training in AI/ML has provided a strong foundation in machine learning, network security, and intelligent applications. Currently working as a Programmer and improving technical skills while pursuing postgraduate studies.

TECHNICAL SKILLS

Programming Languages: Python

Backend & Web Development: Django, Django REST Framework, RESTful APIs, Authentication, Authorization

AI & Machine Learning: Machine Learning, Data Preprocessing, Model Training, Deep Learning, Image Classification

Databases: MySQL, MongoDB

Tools & Platforms: Git, GitHub, Linux

PROFESSIONAL EXPERIENCE

Lab Programmer | *Dhanekula Institute of Engineering & Technology*

Ganguru

July 2025 – Present

- Guide students in Python, C, C++, programming fundamentals, and practical software development concepts.
- Prepare, test, and troubleshoot programming exercises for laboratory sessions.
- Collaborate with students on laboratory programs, assignments, and technical exercises.
- Identify and resolve programming errors during practical sessions and provide clear technical guidance.
- Maintain laboratory systems and support the smooth delivery of programming and technical activities.

Software Developer | *K Bhupal Engineers and Contractors Pvt. Ltd.*

Karnataka

September 2024 – April 2025

- Developed and maintained Python-based backend modules supporting application functionality.
- Contributed to API-driven features and backend components using RESTful development practices.

- Debugged and tested software components to identify issues and improve application reliability.
- Implemented updates to existing functionality through code changes, testing, and troubleshooting.
- Followed secure coding, documentation, and software development practices.

Data Analyst | *E-Tutor*

Vijayawada

July 2023 – March 2024

- Guided students in Python programming, data preparation, analysis, and debugging of programming exercises.
- Cleaned, organized, and analyzed data using Python and spreadsheets.
- Collaborated on data interpretation and preparation of academic reports, ensuring findings were clearly documented.

PROJECTS

Attendance Management Web Application | *Web App*

- Developed a web-based attendance management application for recording and managing student attendance across multiple years, classes, and sections.
- Implemented dynamic class and student management, including manually configured student roll numbers and names.
- Built attendance tracking features to identify present and absent students and automatically calculate attendance totals.
- Technologies: HTML, CSS, JavaScript, Google Apps Script, Google Sheets

Secure Authentication System | *Django Project*

- Built a web-based authentication system with user registration, login, logout, and session management.
- Implemented password hashing and access-control practices to protect user accounts and backend functionality.
- Focused on secure handling of authentication data and maintainable backend implementation.
- Technologies: Python, Django, HTML, CSS, MySQL.

Vendor Management System | *Django Project*

- Developed a backend application for managing vendor information and related operations.
- Created RESTful APIs and connected the application to a MySQL database.
- Organized backend components in a modular structure to support maintainability.
- Technologies: Python, Django, Django REST Framework, MySQL, REST APIs.

Music Recommendation through Facial Emotion Detection

Deep Learning Academic Project

- Developed an AI-based music recommendation system using facial emotion recognition to personalize music suggestions.
- Classified facial images into seven categories: angry, disgust, fear, happy, sad, surprise, and neutral. Mapped predicted emotions to suitable music playlists and recommendation logic.
- Worked with image classification, data preprocessing, model training, and application-level recommendation logic.
- Technologies: Python, Deep Learning, Machine Learning, Image Classification, Facial Emotion Recognition.

INTERNSHIPS & TRAINING

AI-ML Virtual Internship | AWS Academy | EduSkills | July 2022 – September 2022

- Studied machine learning fundamentals, data preprocessing, model evaluation, and cloud-based ML workflows.
- Explored AI/ML applications for monitoring, analytics, and data-driven systems.

EDUCATION

MTech in Computer Science & Engineering

Dhanekula Institute of Engineering & Technology, Ganguru | 2025 – Present

BTech in Computer Science & Engineering

Dhanekula Institute of Engineering & Technology, Ganguru | 2020 – 2023

Diploma in Mechanical Engineering

Dhanekula Institute of Engineering & Technology, Ganguru | 2017 – 2020

SSC

Gemini E.M. High School | 2016 – 2017

CERTIFICATIONS

- PCAP: Programming Essentials in Python provided by Cisco Academy (November 2021)
- AI-ML Virtual Internship provided by AWS Academy & EduSkills (July – September 2022)
- Python Django Certification provided by Udemy (June 2024)

ACHIEVEMENTS & ACTIVITIES

- Participant, Andhra Pradesh State Jeet Kune-Do Championship.
- Participant, National Smart Olympiad conducted by IITs and scientists.
- Participant, SRR International Open FIDE Rating Chess Tournament, 2025.
